

# KAVYA PRATAP SINGH CHAUHAN

B.Tech Computer Science & Engineering

Rewari, Haryana | +91 8901549109 | [ckavya354@gmail.com](mailto:ckavya354@gmail.com) | [LinkedIn](#) | [github.com/zencloser](https://github.com/zencloser)

---

## PROFESSIONAL SUMMARY

B.Tech CSE student at Shiv Nadar University with hands-on experience building full-stack web applications using Python Flask, MySQL, and JavaScript. Developed a multi-role University ERP system with role-based access control, dynamic fee management, and a CGPA estimation and target score calculator. Passionate about backend systems, database design, and automation utilities. Seeking a software engineering internship to contribute to scalable product development.

## EDUCATION

Shiv Nadar University, Greater Noida

2024 - 2028

B.Tech in Computer Science & Engineering

CGPA: 7.3 / 10.0

## TECHNICAL SKILLS

**Languages** Python, Java, C, JavaScript, HTML5, CSS3

**Frameworks** Flask (Python), basic REST API design

**Database** MySQL, relational schema design, SQL queries

**Tools & IDEs** Git, GitHub, VS Code, IntelliJ IDEA

**Libraries** SpeechRecognition, pyttsx3, subprocess

**CS Fundamentals** OOP, Data Structures & Algorithms, DBMS, Operating Systems, Cloud Computing

## PROJECTS

**Automated Course Enrollment System** | *Python Flask · MySQL · HTML/CSS · JavaScript*

[Github](#)

- Developed a full-stack University ERP web application with three-tier role-based access control (Admin, Faculty, Student), serving distinct dashboards and restricted data views per role.
- Designed and implemented a relational MySQL schema to manage course enrollment, student records, department-wise analytics, and payment tracking; enabling the admin to enrol/remove students and view institution-wide CGPA averages.
- Built a CGPA Calculator module allowing students to input current grades and predict the minimum marks required to achieve a target CGPA — the standout feature of the system.
- Developed an Attendance Tracker that dynamically calculates classes attended vs. required, displaying how many sessions a student can miss while maintaining the mandatory 75% attendance threshold.
- Implemented a Fee Management module with department-specific fee breakdowns for students and a consolidated payment status dashboard (paid/unpaid) for the admin panel.
- Organized backend logic using modular Flask route architecture for maintainability and scalability.

**AK — AI Voice Assistant** | *Python · SpeechRecognition · pyttsx3 · subprocess*

Local Project

- Built a Jarvis-inspired personal voice assistant in Python that listens for a custom wake keyword ('AK') and executes system-level commands via natural voice input on a laptop environment.
- Integrated the SpeechRecognition library for real-time audio capture and transcription, paired with pyttsx3 for offline text-to-speech feedback.
- Implemented subprocess-based application launcher enabling voice-triggered opening of desktop apps (VS Code, YouTube with custom search queries) through natural language commands.
- Designed a modular command-handler architecture to support easy extension of new voice modules for future capabilities including email automation and file management.

## CERTIFICATIONS

**Data Analytics Fundamentals** — Learnflu

**Microsoft Excel for Data Analysis** — IRA Skills

## HACKATHONS & COMPETITIONS

**HackData '25** — Participated as Team The Hack Knights | Organised by Shiv Nadar University, Greater Noida | 2025
